

## Project Demo Planning

|               |                                                                    |
|---------------|--------------------------------------------------------------------|
| Date          | 3 July 2026                                                        |
| Team ID       |                                                                    |
| Project Name  | <b>OptiCrop:</b> Smart Agricultural Production Optimization Engine |
| Maximum Marks | 1 Mark                                                             |

### Project Demo Planning:

| S.No | Demo Section                               | Description                                                                                                      | Duration (mins) | Responsible Member                 |
|------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------|-----------------|------------------------------------|
| 1    | Introduction & Problem Statement           | Introduce the project, explain the challenges in crop selection, objectives, and expected impact.                | 2               | <b>Dasari Srividya (Team Lead)</b> |
| 2    | Dataset & Machine Learning Approach        | Explain the agricultural dataset, preprocessing steps, feature selection, algorithms used, and model comparison. | 3               | <b>Ekshith Chokkani</b>            |
| 3    | System Architecture & Application Workflow | Present the project architecture, Flask backend, frontend workflow, and prediction pipeline.                     | 2               | <b>Anusha Idamakanti</b>           |
| 4    | Live Application Demonstration             | Demonstrate the web application by entering soil parameters and displaying crop recommendations.                 | 4               | <b>Devarakonda Revathi</b>         |
| 5    | Results & Performance                      | Present model accuracy, evaluation metrics, testing results, and discuss future enhancements.                    | 2               | <b>Khaadar Vali Shaik</b>          |
| 6    | Conclusion & Q&A                           | Summarize project outcomes, acknowledge team contributions, and answer audience questions.                       | 2               | <b>Entire Team</b>                 |

### Demo Flow Summary:

| Step | Activity                         | Notes                                                                                                                |
|------|----------------------------------|----------------------------------------------------------------------------------------------------------------------|
| 1    | Introduction & Problem Statement | Explain the importance of smart agriculture, existing challenges, and project objectives.                            |
| 2    | Solution Overview                | Describe the dataset, machine learning models, system architecture, and technology stack used in OptiCrop.           |
| 3    | Live Feature Demonstration       | Launch the Flask application, enter sample soil and environmental values, and demonstrate real-time crop prediction. |
| 4    | Q&A Session                      | Answer questions about the machine learning model, implementation, testing, limitations, and future scope.           |
